DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ismail in view of Kang.

With regard to claim 1, Ismail (US 4,362,905) disclose (Fig. 7) a rotatable shunting socket housing for telecommunication devices comprising:

a body having two sockets (68) respectively defined at two opposite sides of the body, each socket having a plurality of metal feet provided in the sockets;

a connector having a plug (66) provided at an exterior side of the connector and perpendicular the sockets and electrically connected with the metal feet.

Ismail does not disclose a cover mounted on a side of the body between the sockets, and a connector rotatably mounted on the cover.

Kang (US 5,082,448) discloses a cover (76) mounted on a side of the body and the connector (30) rotatably mounted on the cover.

.Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to rotatably mount the connector on the cover, as taught by Kang, to prevent twists and kinks of telephone cords attached to the sockets.

With regard to claim 2, Ismail when modified by Kang, disclose (Kang) that the cover (Fig. 3) has a circular opening and the connector has a ring (18) formed at an interior side of the connector

Art Unit: 2833

and rotatably received in the circular opening.

Allowable Subject Matter

Claims 3-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

No prior art has been found to anticipate or render obvious the presently claimed subject matter. Specifically, none of the prior art of record discloses the combination of the limitations presented including the cover having two stops formed at diametrically opposite sides of the circular opening, and the connector has a protrusion formed on a circumference of the ring and located between the stops (claim 3);

the body having a plurality of slots defined' through an upper side and a lower side of the body apd between the sockets, and the cover has a plurality of tongues formed at an upper side and a lower side of the cover and positioned in the respective slots to fasten the cover on the body (claim 5).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alexander D Gilman whose telephone number is 571 272-2004. The examiner can normally be reached on Monday-Friday, 10:30 a.m. - 8:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paula A. Bradley can be reached on 571 272-2800 ext. 33. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
